

INFORMED CONSENT

Bone grafting & regeneration

Patient name: _____ **Date:** _____

DIAGNOSIS: _____

Facts for Consideration

*Patient's initials
required*

_____ I have been informed that I have periodontal (gum and bone) problems and/or disease that should be surgically treated, including the use of bone grafting and techniques for bone regeneration. I understand that the purpose of this procedure in conjunction with periodontal (gum) flap surgery is to allow access for the removal of bacteria by cleaning the roots of teeth and the lining of the gum. It also may treat irregularities, if any of the jawbone by the use of bone graft material so when the gum is replaced about the teeth, it will allow the reduction of pockets, infection and inflammations and may improve bone healing. The decrease in gum pocket depths may improve the ease and effectiveness of my personal oral hygiene and the ability of a dental professional to better clean my teeth. The decrease in infection and inflammation may minimize further loss of bone and gum tissue supporting my teeth which may aid in longer retention of my teeth in the operated area(s).

_____ After anesthetics by injection have numbed the area to be operated, the gum is reflected (incised at surgery) to expose the roots of the teeth which are then cleaned and smoothed. Antibiotics and/or other chemicals may be applied to the roots to decontaminate them before the graft material is placed in the area(s).

_____ I have been advised that bone grafting may be performed in areas of my mouth associated with gum pocketing and/or recession. It has also been explained to me that this is a procedure that may involve surgical grafting of bone by removing a piece(s) of bone from another area of my body, requiring another surgical site, or using commercial source from another human or animal bone source. The graft material may be used in a block form over a large area or in particulate form for smaller areas. I acknowledge that I have had an opportunity to discuss these options, and my choice, with my dentist before consenting to this treatment, procedure or surgery.

Benefits of Bone Grafting and/or Regenerative Surgery, Not Limited to the Following:

_____ The goal of bone grafting and or regenerative surgery is to “grow” bone back, to possibly allow dental implant placement either at the same time as this surgery or a later date. Additionally, the purpose of this surgery may be to help build a restorable jaw ridge for better esthetics and function where a replacement (artificial) tooth will go as part of a dental bridge.

Risks of Bone Grafting and/or Regenerative Surgery, Not Limited to the Following:

_____ I understand that with surgery there may be post-operative bleeding, swelling, pain, infection, facial discoloration, temporary or, on occasion, permanent tooth sensitivity to hot, cold, sweets, or acidic foods. A temporary or permanent numbing of the surgical areas may occur effecting my lips, chin and tongue, possibly affecting my sense of taste. I understand that I may see changes in the appearance of my gums. They may be in a different position on the roots or there may be spaces between the teeth that are larger. I also understand that there may be a need for a second procedure if the initial surgery is not entirely successful.

_____ I understand that I will receive a local anesthetic by injection and/or other medication(s). In rare instances, patients can have a strong and unpredictable reaction to the anesthetic, which may require emergency medical attention. The medication may affect my ability to control swallowing. This increases the chance of swallowing foreign objects during treatment. **Depending on the anesthesia and medications administered, I may need a designated driver to take me home. Rarely, temporary or permanent nerve injury resulting in loss of feeling of the chin, lips, gums, tongue and partial loss of taste can result from an injection.**

_____ I understand that holding my mouth open during treatment may temporarily leave my jaw feeling stiff and sore and may make it difficult for me to open wide for several days. This can occasionally be an indication of a further problem. I must notify this office if this or other jaw function concerns arise.

_____ I understand that all medications have the potential for accompanying risks, side effects, and drug interactions. Therefore, it is critical that I tell my dentist of all medications, and supplements that I am currently taking, which are: _____

_____ I understand that smoking and/or chewing tobacco and/or alcohol intake may affect my ability to have normal gum and/or bone healing and may limit the potential for a successful outcome of my surgery. I agree to follow my dentist's instructions related to daily care of my mouth, teeth and gums.

Alternatives to Suggested Treatment:

_____ I understand that alternatives to bone graft and/or regenerative surgery include no treatment, non-surgical scraping of the teeth roots and lining of the gum (scaling and root planing), with or without medication, in an attempt further to reduce bacteria and tarter under the gumline, dental bridgework, removable partial dentures and no teeth replacement.

Alternatives discussed: _____

No guarantee or assurance has been given to me by anyone that the proposed treatment or surgery will cure or improve the condition(s) listed above.

Check only one of the boxes below that applies to you:

I refuse to give my consent for the proposed treatment as described above and understand the potential consequences associated with this refusal

I have been given the opportunity to ask questions and give my consent for the proposed treatment as described above.

Patient's or Patient's Representative's Signature

Date

I attest that I have discussed the risks, benefits, consequences, and alternatives to bone and gingival grafting with _____ (patient's name) who has had the opportunity to ask questions, and I believe my patient understands what has been explained.
